By 2050, hearing disorders will affect 2.5 billion people worldwide. **In France currently, 1 in 2 people have never undergone a hearing test, and 1 million people are not fitted with hearing aids when they should be.**

The reasons for this lack of care are numerous: the main ones being the price of hearing aids, concerns about their effectiveness, psychological barriers, and limited access to care. **The impact of late-fitting and failure to fit hearing aids is well known** (dementia, social isolation, depression, dependence...). **This lack of access to care is therefore a major public health issue.**

A French company, based in Montpellier founded in 2019, SONUP develops **easy-to-use, fast and reliable solutions for assessing hearing disorders, from the simplest (screening) to the most complex (diagnosis)**. With its expertise in the creation of hearing tests, its ambition is to accelerate the digital transformation of the audiology field, based on innovative technologies and perfect knowledge of the hearing professions.

SONUP solutions are intended primarily for healthcare professionals, whether hearing specialists (ENT doctors, audioprosthodontists) or not (opticians, pharmacists, general practitioners, occupational practitioners, oncologists).

The company also provides solutions for broader targets, such as academic and industrial research laboratories (to optimize their hearing-related research programs), or companies/mutual insurers (in-company hearing screening sessions).

Initially financed by its founders, and supported by the local ecosystem (Créalia Occitanie, BIC de Montpellier, and more recently Parisanté Campus), in November 2022 **SONUP finalized a first round of financing of 3 million euros** from one of France's leading private equity funds.

Less than 4 years after its creation, the company is already seeing strong growth, thanks to its innovative business models and a solid network of professional partners. The company is now seeking to **expand its national deployment and broaden the scope of the technologies it develops.**

# They trust us.

## Institutional partners :

## Business partners :

## Medical and health research entities :

- **TYPE OF COMPANY:** Scale-up
- **HEAD-OFFICE:** Cap Oméga - RPT Benjamin Franklin - 34000 Montpellier
- **CEO:** Maxime Balcon
- **ACTIVITY:** Expert in psychoacoustics, creator of audiological solutions that make hearing assessments accessible, simple and easy to interpret.
- **AMBITION:** Accelerate the digital transformation of the audiology sector, based on innovative technologies and in-depth knowledge of the hearing professions.
- **MISSIONS:** Democratize hearing screening; contribute to quality care for hearing-impaired patients; facilitate the work of healthcare professionals.
- **VALUES:** Independence, innovation and quality of service.
- **DATE OF FOUNDATION:** November 2019
- **DATE OF FIRST COMMERCIALIZATION:** March 2021
- **NUMBER OF EMPLOYEES:** 48

# CEO's biography and story genesis.

“Building bridges between healthcare professionals seemed to be a common-sense solution: cooperation that benefits everyone is what drives me.”

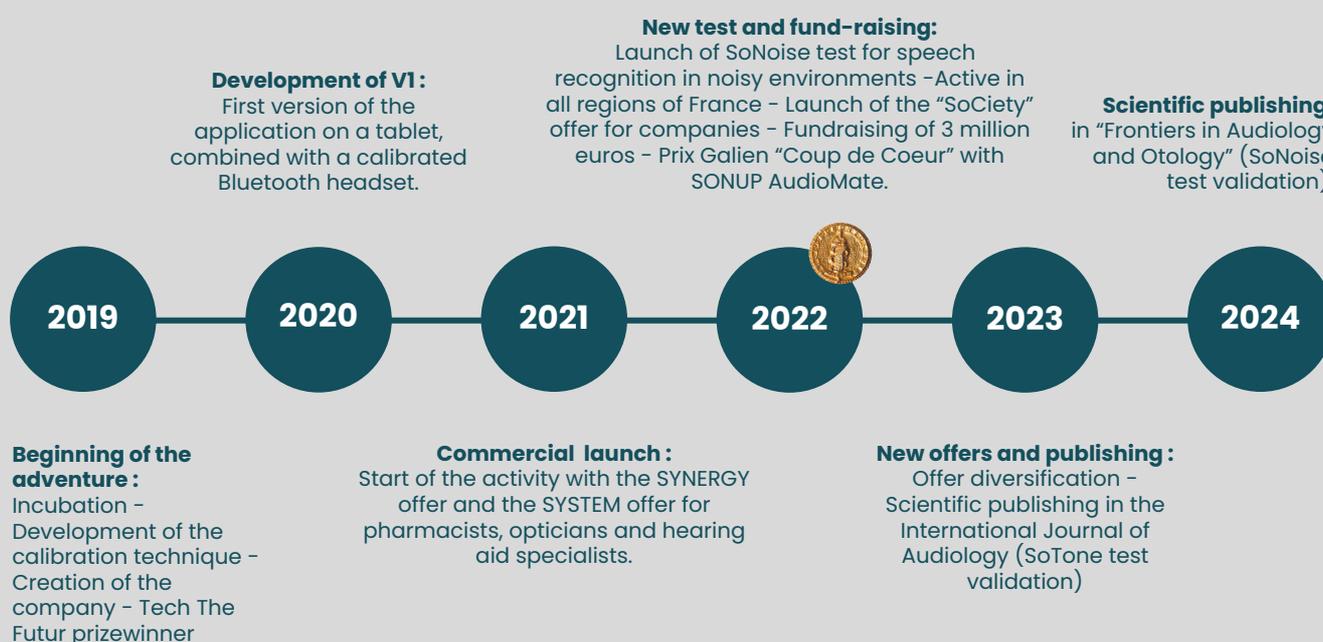

Hearing aid specialist by training and entrepreneur at heart, Maxime BALCON co-founded France's first pluridisciplinary hearing center in 2014.

In 2017, after a life-threatening accident, he was pronounced dead within minutes. A prolonged stay in hospital followed, giving him the opportunity to define how to act more significantly in his field of expertise, and to lay the foundations of what would be SONUP two years later.

Supported by various institutional players, Maxime quickly surrounded himself with a committee of experts, and brought together a dynamic team to carry the SONUP project forward with commitment and enthusiasm.

The company is already achieving strong growth, thanks to its innovative business model and a solid network of partner healthcare professionals.

In 2023, SONUP's first round of financing signs a new phase in its development, marked by the amplification of the national deployment of its initial offering, and the expansion of the scope of application of the technologies it develops.

SONUP is an independent team of about fifty people, committed to the democratization of hearing assessment and the qualitative care of hearing-impaired patients.

## Scientific committee:

Our scientific committee is made up of experts recognized for their skills in the fields of hearing, neuroscience and psychoacoustics.

### **Maxime BALCON (CEO)**

Hearing aid specialist.  
Specialized in audio prosthetics, implantology and audiology.

### **Frédéric VENAIL**

Medical Director of the Otology and Otoneurology and the Maxillofacial surgery unit at the Gui de Chauliac hospital. Researcher in audiology and neuroscience, INM (Montpellier Neuroscience Institute, INSERM).

### **Jean-Charles CECCATO**

PhD and engineer in electronics, automation and electrical engineering. Senior lecturer in Audioprosthesis. Researcher in audiology and neuroscience, INM (Institut des Neurosciences de Montpellier, INSERM).

### **Arnaud GENIN**

Hearing aid specialist.  
Doctoral student in biology and health.

### **Antoine LORENZI**

Hearing aid specialist and PhD in neuroscience.  
Specialized in audio prosthetics, implantology and audiology.

Together they form with **Frank CHASTANET**,  
Head of sales, the group of six founding  
partners of SONUP.

**Our headsets are individually calibrated.**

**All our tests are validated by clinical studies.**

**We collect our results on a French HDS server, in compliance with the RGPD (General Data Protection Regulation).**

## Recurring features of our solutions:

- **Easy to use**
- **Lightweight equipment**
- **Reliable results**

- **Easy to use:**

- Our tests can be conducted as self-tests, or with minimal operator intervention.
- When they are intended to be used by professionals not specialized in hearing, no knowledge of audiology is necessary.

- **Lightweight equipment:**

- All our solutions are made available as **an application on a tablet device, a Bluetooth headset, and that's it!**
- Some of these tests need to be carried out in quiet environments (examination rooms or soundproof booths), but others can be perfectly performed in "noisier" environments.

- **Reliable results:**

- An **innovative Bluetooth calibration technique** has been developed, enabling reliable testing even in non-standardized environments and on all types of tablet (iOS and Android).
- **The headsets are individually calibrated**, enabling control of output levels and guaranteeing reliable results.
- They feature **active noise reduction**, enabling tests to be carried out in non-standardized noise environments.

## → Our tests

The two main types of tests available through our solutions are :

- **SoTone** : pure tone screening test.  
This is a spotting test to determine whether the patient HEARS correctly in both ears.  
> Scientific publication : [The International Journal of Audiology](#)
- **SoNoise** : noise comprehension test.  
This is a test to determine whether the patient UNDERSTANDS correctly.  
> Scientific publication : [Frontiers Audiology and Otolology](#)

These are followed, depending on the target use, by derivatives of these tests, other tests, surveys, etc...

## SONUP System

Hearing assessment solution for hearing aid laboratories and integrated optical store centers, enabling prospects to be qualified in only 3 minutes, prior to making an appointment with a hearing aid specialist.

→ Targeted industries: opticians, hearing aid specialists.

## SONUP AudioMate (‘Favorites’ Prix Galien 2022)

A hearing assessment solution that makes self-testing possible in non-standardized environments, while guaranteeing test-taking conditions. It notifies follow-up teams in real time of any abnormal results.

→ Targeted industries: care facilities (oncology departments), academic and industrial research laboratories
